BWA Water Additives To Exhibit at the International Water Conference (IWC)

BWA Water Additives, world leader in sustainable water treatment solutions, will exhibit at the upcoming International Water Conference (IWC) in San Antonio, TX, November 4 – 8, 2012.

Visit IWC booth #67 to learn more about BWA's newly EPA-registered biocide, Bellacide[®] 303, a low dosing non-oxidizer providing dramatic biofilm clean-up when used in combination with oxidizers and providing reduced treatment costs compared to traditional non-oxidizers. Company representatives will also be available to discuss BWA's Belclene[®] 810, a unique biodegradable antiscalant designed for phosphorus-free, N-free industrial water treatment applications.

BWA Water Additives will also be sponsoring the IWC's 'Speakers Breakfast'. Questions can be directed to Melissa.Goeren@wateradditives.com.

BWA Water Additives is a technology-led specialty chemicals company whose only business is providing sustainable solutions to resolve our customers' water treatment challenges.
