BWA Water Additives Presents, Non-oxidizing Biocides, Biodegradable Antiscalants at Corrosion 2013

BWA Water Additives, a leading supplier of water treatment and oilfield additives, will be one of the only specialty chemical companies exhibiting at NACE International's Corrosion 2013 Annual Tradeshow held March 18 – 21 at the Orlando Convention Center.

“BWA has been participating in the Corrosion annual conferences for many years, not only as an exhibitor of scale control, biocides and corrosion chemistries, but also holding key positions on various technical committees and supporting our customer base of oilfield service companies. This show brings together corrosion and water treatment experts in the oil and gas industry and is a perfect showcase for BWA to demonstrate our application knowledge and latest innovations for the industry,” says Nozi Hamidi, VP Marketing for BWA Water Additives.

Located in booth #725, BWA technical experts will showcase the Bellasol[®] oilfield antiscalant product line, which meets the Gold Standard of CEFAS and includes a biodegradable antiscalant that is hydrothermally stable, compatible with biocides and other oilfield additives, and outperforms traditional polyasparates for inhibition of barium sulfate, calcium carbonate, and ‘mixed’ scales. BWA will also feature its recently launched Bellacide[®] 350, a biocide widely used in hydraulic fracturing that is highly effective at controlling sulfate reducing bacteria and helps minimize health and safety risk compared to traditional biocides.

Attendees are also invited to attend two technical sessions where BWA representatives will lead industry expert discussions:

- Biocide Application / Misapplication, TEG-149X, Monday, March 18th from 2-5PM

- Water Treatment Technical Information Exchange, STG 11 TIE, Thursday, March 21st from 8-11AM.

Both of these sessions will be of interest to industrial cooling as well as oil & gas industry attendees.

BWA Water Additives has been a global leader in sustainable water treatment technologies for industrial water treatment since 1973.
